NFT Technology Start-up Initiative

Infinity is currently seeking investors to start-up a technology NFT workspace (website) which allows holders of designs and technology to register, deploy, and monetize their work.

This could be complimentary to the patent system, but would provide an alternative for a fast-to-market alternative for developers allowing them to gain access to leases, royalties, reselling, renting, and other income options.

We would like to deploy the following quickly:

- start-up company as the technology handler for NFTs
- website
- Staking and blockchain algorithms including mining via Filemaker (database)
- Trading post for real equipment based on NFTs

From Ethereum: NFTs are tokens that we can use to represent ownership of unique items. They let us tokenise things like art, collectibles, even real estate. They can only have one official owner at a time and they're secured by the Ethereum blockchain – no one can modify the record of ownership or copy/paste a new NFT into existence. NFT stands for non-fungible token. Non-fungible is an economic term that you could use to describe things like your furniture, a song file, or your computer. These things are not interchangeable for other items because they have unique properties. NFTs give the ability to assign or claim ownership of any unique piece of digital data, trackable by using Ethereum's blockchain as a public ledger. An NFT is minted from digital objects as a representation of digital or non-digital assets.

Infinity Supercritical CO2 10L Extractor NFT Worldwide Rights

Supercritical CO2 Hemp Oil Extraction for Full Spectrum Botanical Oil which retains the terpenes and other valuable plant components during extraction. System runs silent with small footprint of 24 inches by 48 inches.

Infinity Supercritical CO2 10 Liter Extractor Design and Worldwide Rights NFT.

The Infinity Supercritical 10L CO2 extractor is for botanical oil extraction, which is rich in terpenes and can produce shelf ready full spectrum oil. With over 5 years of development, this industry leader mature extractor machine has been sold since 2015 and is part of many profitable businesses. This NFT is for the purchase of worldwide rights which includes the design.

Opt-out: You may opt-out if you do not wish to receive any revenue from the sale of machines or licensing. Infinity retains 50 percent of and sales unless owner of NFT elects to opt-out. Purpose: the 10L machine will extract up to 10 liters of volume of material in the extraction vessel.

Pressure: 2,000 psi or less of CO2.

Working Fluid: Liquid CO2 (can be purchased from local gas provides and uses same CO2 used by bars and restaurants). Footprint: 24 x 48 x 70 inches mounted on heavy duty casters and fits through any standard hallway, doorway, and elevator.

Sound: Runs silent.

Production: depending on industry and botanical extracted, can make \$5,000 to \$15,000 per day revenue. Included: testing notes, design, cad cam, supplier lists, spreadsheets on cost of manufacturing, links for suppliers and purchasing components.

Machine Cost: Can product for less than \$25,000.

Sell Price: can sell machines for between \$39,000 to \$99,000. NFT buyer has option of purchasing entire business including website for additional fee.

Other Applications: The process can also be used for electrowinning, e-waste recycling, and lithium battery recycling, gold mining electronic wastes, precious metals. CO2 can also be used in a reverse fuel cell with nafion to make a gas-to-liquids fuel, such as methanol, ethanol and butanol or ethylene. Supercritical CO2 has also been used for treating nafion to make it more effective catalyst. SCO2 can remove water from wood as an alternative to conventional kiln drying.
