

**Extract - Mix - Formulate**

# SWISSmixIT

**Extract • Mix • Formulate  
DIY Home System**

**Farm-to-Table Home  
Extraction**

Purchase Botanical Pods for DIY Extraction (or use your own herbs)

Add Carrier Oil (Olive, Rice Bran, Canola or other food oils) and Botanicals

Oil Extracts the botanical Oil and is dispensed together as a solution

May use multiple Mason jars for a variety of botanical oil extractions

**Standard Mason Jar**

Pump-top Dispenser

Clear Mason Jar (watch the oil and botanicals mixing)

Stainless Steel Filtration System  
(dispense oil while leaving behind botanicals)  
Can also be used for fermentation

Stainless Steel Filter is Food Grade and Dishwasher Safe

Touch Free Hi-Tech Solid State Mixing System

The system allows home DIY extraction of botanicals for topical oil. A carrier oil (Olive oil or other vegetable oils) actually draws out the herbal oil from any botanical that has oil, with time and mixing. A patented hi-tech solid state mixer agitates the solution to reduce the time needed for extraction. Using a standard Mason jar gives you the option of making different botanical extractions while providing a simple and effective way to dispense the oil right from the solution. A food-grade reusable stainless steel filter ensures the botanical material is left in the jar, while pure oil is dispensed. This system is for production of topical oils which can be applied to skin, including Hemp flower, Gooseberry, Oregano, Tamanu, Chamomile, Aloe. For squalene compounds, use Amaranth seed, Rice bran, or Wheat germ. Mix and match to experiment with different herbal remedies. The Pod system with solid state mixing can also be used for other future additions for making skin creams, craft vinegar, and other nutraceutical applications.
